Joel Acef

Frontend Developer | React and Next.js, Angular
Argentina

Summary

Hi, I'm Joel — a Frontend Developer and Interactive Designer with a strong background in React + Next.js, Angular, and Vue.js, building projects across diverse industries since 2019. I'm passionate about working on challenging projects that push me to keep learning and refining my skills. I enjoy exploring and implementing new technologies, best practices, libraries, and frameworks to create scalable, efficient, and user-friendly solutions. Beyond technical development, I value collaboration and knowledge-sharing, always striving to add clarity and consistency to the projects I work on.

Since 2023, I've also taken on the responsibility of coordinating a development team, which has deepened my interest in leadership, project management, and team dynamics. This experience has allowed me to grow not only as a developer but also as someone who can guide, support, and motivate others. I consider myself a curious and adaptable professional who enjoys continuous growth, whether by embracing new tools, experimenting with fresh ideas, or contributing to projects in different fields.

Experience

Globant

Desarrollador de IU web
November 2024 - Present (1 year 1 month)
Córdoba, Córdoba, Argentina

I worked on a team responsible for managing all ancillary services for a major British airline, specifically developing features related to seat selection and baggage within the reservation system. Our stack included React, Next.js, and TypeScript, with unit testing implemented using Vitest. A key focus of the project was ensuring compliance with European airline accessibility (A11Y) regulations.

JS Software Professional Business Solutions

Frontend Developer & Scrum Master
June 2023 - November 2024 (1 year 6 months)
Canada

I was responsible for the company's main project, a Back Office web application developed with React and Next.js, where I carried out both management and development tasks. When I joined, I introduced and implemented agile methodologies, as they had not been applied before. Additionally, for the same company, I worked on another project—an e-commerce platform for retailers built with Vue.js. Although the project had already been started, it required a full refactor to make it adaptable for clients across different industries.

Mendel
Frontend Developer
February 2022 - June 2023 (1 year 5 months)
México

I worked on the company's main project, a web application for the management and control of corporate expenses, developed with Angular.
My main duties and responsibilities inclued: Developing new user-facing web features, creating reusable code and libraries for future use, ensuring the technical feasibility of UI/UX designs, optimizing applications for maximum speed and scalability. I was one of the people responsible for the frontend area and occasionally conducted technical interviews.

BITLOGIC.io
Frontend Developer
July 2019 - February 2022 (2 years 8 months)
Provincia de Córdoba, Argentina

I worked on two of the company's main projects:
1) Web application for university students in React: In this project, I applied technologies such as unit testing with Jest, Enzyme, and React Testing Library, as well as Redux, Material UI, Bootstrap, and Node.js (Axios and Express.js)
2) Web application for commercial staff in Angular: This project was designed to sell university career packages. Alongside frontend development, I also performed backend tasks using Java (SpringBoot) and Node.js.
For both projects, I worked with agile methodologies (Scrum), JIRA, AWS, CI/CD, and GitLab, and I gained experience in pipeline configuration.

Trompo Agencia
Web Developer

January 2018 - June 2019 (1 year 6 months)
Provincia de Córdoba, Argentina

In charge of the Web Development area, focused on Frontend tasks. I worked with Wordpress and Prestashop templates, in most cases customizing templates for different clients. I also developed sites in HTML5, CSS3 and JavaScript, either from scratch or customizing templates. I used frameworks like Bootstrap and JQuery.
Gran parte de los trabajos estan subidos en mi perfil de Behance --> https://www.behance.net/joelacef/

CriterioNet
Technical Supporter - Web Designer
September 2011 - May 2013 (1 year 9 months)
Gral Paz 79

This experience started as a Collage Intership and ended up becoming a full-time job. I was in charge of the Web Development area, focused on frontend and support tasks. I worked with Wordpress and Prestashop templates, in most cases customizing templates for different clients. I also developed sites in HTML5, CSS3 and JavaScript, either from scratch or customizing templates. I used frameworks like Bootstrap and JQuery.
